

(a)

Prepare for
computational trust
analysis of DSPG

(b)

Determine nesting
levels of all edges,
and find every PNPS

(c)

Select
PNPS with the
highest nesting
level

If no PNPS found

(d)

Compute trust
discounting for each
path in PNPS

(e)

Compute trust fusion
of edges that replace
paths in PNPS

(f)

Set the NL of the edge
that replaces the PNPS
to the PNPS nesting
level - 1

(g)

Compute trust
discounting for last
path in DSPG

(h)

Completed DSPG
trust computation
